General Information

Prices All prices listed in the price list are recommended retail prices excluding VAT and are valid until revised.

Delivery times Indicated delivery times are always ex works Dübendorf (Switzerland).
Standard delivery time is 4-5 weeks.

Delivery surcharges CH & FL Free delivery from gross sales price CHF 600.-; otherwise surcharge CHF 40.

Colours (lacquered) Standard colours The available standard colours can be found on the product price sheet.

Special colours From the Lehni colour chart surcharge of + 150.- per colour and order.
From the RAL or NCS colour chart Surcharge of + 300.- per colour and order.

Dimensions The dimensions given are basic dimensions.

OUTDOOR Collections with this symbol are weatherproof and suitable for outdoor use.

Special features

Aluminium blank Machining marks may be visible in the raw aluminium finish. They are not a reason for complaint.

Linoleum Linoleum is a natural product which may show slight irregularities in the surface.
They are no reason for complaint.

Wood Every wood has individual structures and colours and its colour changes over time under the influence of light.
This is not a reason for complaint.

Bananatex Exposure to sunlight can generally cause colours to fade or yellow.
Due to the deliberate avoidance of environmentally harmful finishing of the fabrics,
the darker fabrics tend to fade more when exposed to strong sunlight.

Lehni Origin and Sustainability

Origin In 1922, Rudolf Lehni senior founded the sheet metal workshop not far from the Kunst- und Schauspielhaus. The history of the Lehni company has been linked to art and culture since its beginnings. Max Bill had his famous corrugated relief made by Lehni as early as 1932, and further commissions for various artists and architects followed. In 1956 Rudolf Lehni junior took over the management of the company and expanded it considerably. The Lehni company increasingly became a sought-after partner for the realisation of sophisticated metalwork. In addition, Rudolf Lehni taught materials science and metalworking at the Zurich School of Arts and Crafts and he approached the world of industrial design. This led to the creation of the first piece of aluminium furniture in the Lehni collection in 1964, the famous aluminium shelf by Zurich designer Andreas Christen, which still enjoys a high reputation in the design world today. In 1975, the company moved from Zurich to its new premises in Dübendorf, which were designed by Zurich architect Ernst Gisel. Since then, countless products and projects have been implemented and Lehni continues to shape the Swiss design scene to this day.

Sustainability Lehni currently employs around 12 people and almost 80% of the value added is at its own site in Dübendorf. The remaining good 30% is largely in the immediate vicinity of the company building. Lehni strives to create products that are as durable as possible and that are developed and produced "in-house" or in the immediate surroundings.

Circular design "Made in Dübendorf ZH, Switzerland":

Circular economy is a model of production and consumption that has been in Lehni's DNA since the beginning. Products should be used, shared, reused, repaired, refurbished and ultimately recycled in such a way that they can be returned to the cycle for as long as possible. Lehni's products have been developed in such a way that they use as few resources as possible and, if they do, that they at least have a long service life and can be disassembled into their individual parts again at the end of their life cycle. Formally, too, the quality of the design is impressive with its timeless design and durability.

The resale value of Lehni products is remarkably high. However, if you wish to dispose of the furniture, Lehni is prepared to take it back, either to refurbish it and put it on the "Second Life" market or to recycle it professionally so that the materials can be reintroduced into the cycle.

Aluminium in particular is almost completely recyclable and can therefore be reused. When aluminium is recycled, up to 95% of the energy originally used is saved compared to the initial production. Aluminium is therefore not waste, but a valuable material in the truest sense of the word, which can be used again after the recycling process has been completed without any loss of quality. That is why Lehni also uses recycled aluminium in the production of new furniture.

Lehni materials

- Metal** Lehni most frequently uses the metal aluminium. Aluminium is an extremely durable material that can be fully recycled at the end of its life. And the parts that are made of steel for stability and functional reasons can also be melted down and fully recycled at the end of their life cycle. The metals copper and brass are also used for custom-made products.
- Wood** Wood is a natural material. It has individual structures and colours that make each piece of wooden furniture unique, changing colour over time when exposed to light. Lehni uses wood as a raw material in many ways, e.g. as veneer, plywood, chipboard, paper, cardboard or solid wood. We buy wood and wood-based materials in Switzerland. This way we can ensure that Switzerland's Timber Trade Regulation and the requirements of the European Timber Regulation (EUTR) are met and that only FSC or PEFC certified wood is procured.
- Linoleum** Linoleum consists of 100% organic and mineral raw materials, of which over 80% are renewable. The components of linoleum include: Linseed oil, which is extracted from the seed of the flax plant. Linoleum is characterised by a distinctive feel and silky matt, pleasantly warm, elastic surface.
- Fabrics** Lehni mainly uses fabrics from the companies Kvadrat and Bananatex. Other fabrics can also be processed after consultation. ***Kvadrat*** has been a leader in textile design and innovation since 1968. They are an internationally renowned and progressive design company committed to continually pushing the boundaries of aesthetic, creative and technological advancement in textile design. ***Bananatex***® produces the world's first durable, technical fabric made exclusively from the naturally grown Abacá banana plants. Bananatex® fabric is Cradle to Cradle Certified® Gold certified, the world's most advanced standard for products that are safe, circular and responsibly produced.
- Plastics** Plastic is one of the most innovative materials of the last century. It can be moulded into any shape, it enables the implementation of new concepts and it can be durable and weatherproof. As a manufacturer, Lehni is aware of its responsibility to use plastics sensibly and to limit their impact on the environment. That is why Lehni designs its products so that they do not become obsolete after a few years.

Lehni care instructions

Metal

A special cleaner as well as a microfibre cloth are ideal for removing dirt from metals. However, avoid using abrasive cleaners or metallic sponges. Both the grains of the cleaning agent and the steel wool can scratch the surface.

Home remedies are also often effective on metals. Use a few drops of vinegar, the juice of a squeezed lemon or a paste of baking soda and water. For the latter, mix about 3 tablespoons of baking soda with 1 tablespoon to 2 tablespoons of water, rub the corresponding home remedy on the dirty stainless steel surface and rinse it thoroughly with water.

Wood

The surface of veneered furniture is protected by lacquer. It is quite sufficient to wipe off dust regularly with a soft, dry cloth or a slightly damp supple leather in the direction of the grain of the wood. You can also add a little washing-up liquid to the water.

Bleaching and acidic additives are prohibited, as are all other cleaning, polishing or even scouring agents. Lacquered veneer surfaces must not be cleaned with microfibre cloths. Acidic liquids, e.g. fruit juices or alcohol, should be dabbed off immediately and the surface wiped with a damp cloth/leather.

Linoleum

Loose dirt can be removed with dust-binding cloths or by vacuuming. To remove adherent dirt, dissolve a neutral cleaner (neutral pH) in water. Soak a soft cloth with cleaning solution and wring out well. Use this to wipe the linoleum surface clean.

Special instructions:

- Especially in the post-oxidation phase, a "yellow tint", the drying chamber film, develops on linoleum. This is particularly noticeable with light colours, but disappears completely when exposed to UV light, and the linoleum retains its original colour. On the other hand, this "yellow cast" reappears if the surface of the floor covering is covered for a longer period of time with e.g. monitors, mouse pads, etc., but disappears as soon as the floor covering is exposed to daylight again. The drying chamber film cannot be removed for cleaning purposes.

- Flower pots and tubs made of terracotta or clay can leave discolouration on linoleum; please use suitable coasters.

- Hand and equipment disinfectants can cause staining due to their high solvent content. If the linoleum surface needs to be disinfected, please use only surface disinfectants suitable for linoleum and test them beforehand on a sample piece or on a non-visible area.

- Colouring food (e.g. ketchup, red wine, coffee, etc.) can leave stains if left on for a longer period of time, which may not be able to be removed. Please clean the surface immediately if it becomes soiled.

- The desktop material can only withstand heat up to 50°. Rule of thumb: If the object to be placed can still be touched in relation to the heat emitted, then it can also be placed on the desktop material.

Scratches can be removed to a certain extent with a shelled and skinned walnut by rubbing the white walnut flesh over the area and then wiping it with a soft cotton cloth.

Upholstery

Like all materials in daily use, upholstery fabrics also require regular care, as they are also subject to constant dust and contact soiling. In general, soiling should not be allowed to become too intense, so as not to complicate cleaning measures and to prolong durability.

The basic rule is:

- Regular vacuuming with a suitable upholstery nozzle or brush.

- Clean semi-annually with a damp cloth to maintain the elasticity of the fibres, wipe velour fabrics once from left to right and once in the opposite direction, allow to dry completely before use.

Plastics

Vinegar and lemon work reliably on light soiling. Vinegar and lemon are gentle agents that you can use to clean plastic. After pre-cleaning the plastic object to be cleaned with lukewarm rinsing water, mix lukewarm water with vinegar or lemon.
