Lehni Origin and Sustainability

Origin In 1922, Rudolf Lehni senior founded the sheet metal workshop not far from the Kunst- und Schauspielhaus. The history of the Lehni company has been linked to art and culture since its beginnings. Max Bill had his famous corrugated relief made by Lehni as early as 1932, and further commissions for various artists and architects followed. In 1956 Rudolf Lehni junior took over the management of the company and expanded it considerably. The Lehni company increasingly became a sought-after partner for the realisation of sophisticated metalwork. In addition, Rudolf Lehni taught materials science and metalworking at the Zurich School of Arts and Crafts and he approached the world of industrial design. This led to the creation of the first piece of aluminium furniture in the Lehni collection in 1964, the famous aluminium shelf by Zurich designer Andreas Christen, which still enjoys a high reputation in the design world today. In 1975, the company moved from Zurich to its new premises in Dübendorf, which were designed by Zurich architect Ernst Gisel. Since then, countless products and projects have been implemented and Lehni continues to shape the Swiss design scene to this day.

Sustainability Lehni currently employs around 12 people and almost 80% of the value added is at its own site in Dübendorf. The remaining good 30% is largely in the immediate vicinity of the company building. Lehni strives to create products that are as durable as possible and that are developed and produced "in-house" or in the immediate surroundings.

Circular design "Made in Dübendorf ZH, Switzerland":

Circular economy is a model of production and consumption that has been in Lehni's DNA since the beginning. Products should be used, shared, reused, repaired, refurbished and ultimately recycled in such a way that they can be returned to the cycle for as long as possible. Lehni's products have been developed in such a way that they use as few resources as possible and, if they do, that they at least have a long service life and can be disassembled into their individual parts again at the end of their life cycle. Formally, too, the quality of the design is impressive with its timeless design and durability.

The resale value of Lehni products is remarkably high. However, if you wish to dispose of the furniture, Lehni is prepared to take it back, either to refurbish it and put it on the "Second Life" market or to recycle it professionally so that the materials can be reintroduced into the cycle.

Aluminium in particular is almost completely recyclable and can therefore be reused. When aluminium is recycled, up to 95% of the energy originally used is saved compared to the initial production. Aluminium is therefore not waste, but a valuable material in the truest sense of the word, which can be used again after the recycling process has been completed without any loss of quality. That is why Lehni also uses recycled aluminium in the production of new furniture.

Lehni materials

Metal

Lehni most frequently uses the metal aluminium. Aluminium is an extremely durable material that can be fully recycled at the end of its life. And the parts that are made of steel for stability and functional reasons can also be melted down and fully recycled at the end of their life cycle. The metals copper and brass are also used for custom-made products.

Wood

Wood is a natural material. It has individual structures and colours that make each piece of wooden furniture unique, changing colour over time when exposed to light.

Lehni uses wood as a raw material in many ways, e.g. as veneer, plywood, chipboard, paper, cardboard or solid wood. We buy wood and wood-based materials in Switzerland. This way we can ensure that Switzerland's Timber Trade Regulation and the requirements of the European Timber Regulation (EUTR) are met and that only FSC or PEFC certified wood is procured.

Linoleum

Linoleum consists of 100% organic and mineral raw materials, of which over 80% are renewable. The components of linoleum include: Linseed oil, which is extracted from the seed of the flax plant. Linoleum is characterised by a distinctive feel and silky matt, pleasantly warm, elastic surface.

Fabrics

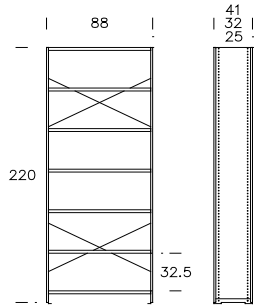

Lehni mainly uses fabrics from the companies Kvadrat and Bananatex. Other fabrics can also be processed after consultation.

Kvadrat has been a leader in textile design and innovation since 1968. They are an internationally renowned and progressive design company committed to continually pushing the boundaries of aesthetic, creative and technological advancement in textile design.

Bananatex® produces the world's first durable, technical fabric made exclusively from the naturally grown Abacá banana plants. Bananatex® fabric is Cradle to Cradle Certified® Gold certified, the world's most advanced standard for products that are safe, circular and responsibly produced.

Plastics

Plastic is one of the most innovative materials of the last century. It can be moulded into any shape, it enables the implementation of new concepts and it can be durable and weatherproof. As a manufacturer, Lehni is aware of its responsibility to use plastics sensibly and to limit their impact on the environment. That is why Lehni designs its products so that they do not become obsolete after a few years.
